## INTRODUCTION

This guide is a listing of the major agencies with mandates and jurisdictions in the Fraser River estuary.

During the initial project development process it is suggested that all proposals be discussed with the pertinent agencies having concerns. To determine which agencies, refer to the Agency Guide matrix on the following page.

To use the matrix, locate the activities pertaining to your proposal across the top of the page. The agencies with concerns are shown by an "x" in the column under.

Having found the agencies, refer to the appropriate page for a summary of the agencies mandates. The contact and phone number are provided to initiate discussion. We strongly recommend making appointments in advance to ensure the contact will be available when you wish to meet with them.

It is recommended that informal discussion with concerned agencies be carried out prior to submitting your completed application to the appropriate Lead Agency.

AGENCY RESPONSIBILITIES IN THE ESTUARY

Under Section 91 of the British North America Act, the Parliament of Canada has exclusive Legislative Authority over certain classes of subjects including "Navigation and Shipping". The Department of Transport is the Federal organization responsible for the Navigable Waters Protection Act as well as other pieces of marine legislation which fall into this class of subjects. The special purpose of the Navigable Waters Protection Act is to protect the public right of navigation in the navigable waters of Canada by insuring that the construction or placement of any type of work in, upon, over, under, through or across any navigable waterway in Canada is approved by the Minister of Transport. This includes dredging for any purpose whatsoever as well as dumping.

AGENCY RESPONSIBILITIES IN THE ESTUARY

Protection of migratory birds in the Estuary is provided for under the Migratory Birds Convention Act and the Canada Wildlife Act which empower the federal Department of Environment to maintain adequate habitat for migratory birds. The Canadian Wildlife Service administers that program through regular monitoring of bird populations, controlling hunting, and acquiring and enhancing productive areas.

## AGENCY RESPONSIBILITIES IN THE ESTUARY

Responsible for enforcing and administering Section 33 of the Fisheries Act, which deals with waste discharges into fish-bearing waters. Responsible for conservation of migratory birds and their habitat under the Migratory Birds Convention Act. Responsible for approving disposal of waste materials and dredgeate in the ocean pursuant to the Ocean Dumping Control Act and the Fisheries Act. Responsible for regulation of environmental contaminants under the Contaminants Control Act.

Any person planning a project which involves handling and disposal of any contaminant, waste material or other sensitive commodity, or which involves foreshore construction or intrusions into forshore areas of the river, would be well advised to contact Environment Canada to determine how the above legislation may affect their project.

| | |
|---|---|
| TYPE OF AUTHORITY: | Federal |
| ENABLING LEGISLATION: | Fisheries Act of Canada |

## AGENCY RESPONSIBILITIES IN THE ESTUARY

Management and conservation of fish and those natural environment systems that support fish is provided for under the Federal Fisheries Act. Responsibility for administering the Act lies with the Minister of Fisheries and Oceans and his department. The Act provides for protection of water quality for fish and fish habitats.

The term habitat covers a great variety of environments where fish live. The Fisheries Act defines them as: "Spawning grounds and nursery, rearing, food supply and migration areas on which fish depend directly or indirectly in order to carry out their life processess." (Section 31(5).) In other words, the habitats include not only the water in rivers, lakes, streams and oceans but also the total surroundings in which plants and other life forms interact to make fish life possible.

Anyone planning to discharge a deleterious substance to waters frequented by fish, or buying property, or planning work that might have some impact on coastal waters, salt marshes, streams, river beds, lake shores, or marine offshore areas should first inquire how Canada's fisheries habitat protection laws could affect their plans.

## AGENCY RESPONSIBILITIES IN THE ESTUARY

The Fraser River Harbour Commission has the mandate to develop a viable and efficient port, servicing the lower mainland of British Columbia while interfacing with the nationwide transportation system.

The Commission requires estuary users within its area of jurisdiction to occupy land by Lease or Use/Occupy Permit.

Any construction or alteration of the leased or held area must be approved by the Commission prior to commencement. This requirement is to ensure that all construction is consistent with the navigational requirements of the harbour.

Projects that do not affect navigation are screened to ensure they are compatible with other federal agencies.

AGENCY RESPONSIBILITIES IN THE ESTUARY

The North Fraser Harbour Commission has a high degree of autonomy provided by the Harbour Commissions Act. This autonomy allows the Commmission to meet its objectives in management and operation of the port so that it is efficient, financially self-supporting and an effective instrument of support for the achievement of National, Regional and Local economic and social objectives consistent with the responsibility of the Minister of Transport to ensure the integrity and efficiency of the national ports system and the optimum deployment of resources. It is the continuing aim of the Commission to meet and surpass these objectives. The Commission considers itself the manager of the total of the resources comprising the North Fraser Harbour and therefore seeks to attract those socio-economic developments with the objectives of the Minister of Transport, the surrounding community and the Commission.

The Commission is responsible to ensure that all Federal and Provincial lands situate in the Harbour and occupied by users are under lease agreements consistent with the policies of the respective Government and that the occupation is consistent with current policies.

The Commission is responsible to ensure that any construction, dredging or alteration of foreshore, whether leased or otherwise is consistent with current policies respecting the Navigable Waters Protection Act and other approval processes.

over

The Commission is responsible for maintenance of all Navigable Channels in the Harbour and for providing recommendations to Canadian Coast Guard with respect to maintenance dredging of the Navigable Channels.

The Commission is responsible for the ongoing planning of the Harbour in a manner that:

- recognizes the competing uses of the resource in a manner that provides for the best use of the resources.

- encourages efficient use of the water for the transportation of goods.

- is co-ordinated with other marine activities and surface and air transportation systems.

- provides opportunities for socio-economic development in a manner that recognizes the needs of society.

- improves the aesthetics of the Harbour to a level acceptable to society.

- establishes an ecological responsibility in the planning framework

## AGENCY RESPONSIBILITIES IN THE ESTUARY

Under the Wildlife Act, Fish and Wildlife Management has the authority to act on matters that affect resident or migratory wildlife within provincial boundaries. Delegated responsibility by the Federal Government for resident fish and anadromous trout and char under the authority of the federal Fisheries Act.

Protection of the habitat upon which fish and wildlife species depend is a key component of our mandate. The Fraser Estuary is an extremely important habitat for a variety of fish and wildlife species. As a result, preservation of the estuary and its associated environs is a major part of our management efforts.

## AGENCY RESPONSIBILITIES IN THE ESTUARY

The goal of the Waste Management Program is to protect the environment of B.C. by controlling the impact of polluting substances. The objectives are to preserve the quality of the air, water and land environment of the province at or above acceptable levels by managing the discharge of pollutants.

This goal is pursued through a permit system which requires registration and approval for any discharge of waste to the environment. Limits are set for the quantity and quality of discharges to comply with specific objectives. Compliance with these limits is monitored by the permittee and by Waste Management staff.

Unauthorized discharges and non-compliance with permit conditions are subject to action under the Waste Management Act.

| TYPE OF AUTHORITY: | Provincial |
| ENABLING LEGISLATION: | Heritage Conservation Act |

## AGENCY RESPONSIBILITIES IN THE ESTUARY

The Heritage Conservation Branch is responsible for managing B.C.'s heritage resources. In this role the Branch contributes to the provincial process for determining priorities and regulation governing land use and development.

In addition to their potential economic value to British Columbia's recreation and tourism industry, heritage sites may have scientific, educational, technological, or sociological value to the province and its people. The protection of significant heritage sites so that thier intrinsic values may be realized is an important function to the Branch. However, the use of land for this purpose must often be compared with other viable uses the land base is capable of supporting. The following objectives reflect heritage resource management policy in British Columbia:

- to conserve representative samples of the province's heritage for the scientific, educational and recreational benefit of present and future generations,
- to ensure that heritage resource values and concerns are considered in the course of public and private land developments,
- to ensure, where decisions are made to develop land, that proponents, follow the guidelines.

| TYPE OF AUTHORITY: | Municipal |
| ENABLING LEGISLATION: | B.C. Municipal Act |

---

AGENCY RESPONSIBILITIES IN THE ESTUARY

The Municipality is mandated to provide services and regulate land use within its boundaries.

The legal boundaries of the Corporation of Delta, as they pertain to the estuary, on the International Border on the South through Boundary Bay, the Roberts Bank drop off on the west and the middle of the Fraser's main arm upstream to, and including Annacis Island on the north. All Municipal regulations are in affect to the boundaries of the Municipality. Having said this, it is recognized these may, in some instances, be an overlap or conflict between municipal and senior government regulations. In these cases it is assumed the senior government statute is the governing regulation.

In addition to the direct controls the Municipality has on activities within the estuary, some indirect or secondary regulatory function must be recognized. While Delta does not control dredging per se, we do have an obligation to regulate disposal sites, noise abatement, drainage water return, etc.

## AGENCY RESPONSIBILITIES IN THE ESTUARY

The Township of Langley is responsible for regulating the use of Land, buildings and structures within the upland portion of the estuary area within the municipality. The Township's Approving Officer has responsibility for reviewing and deciding applications for subdivision of land along the estuary area.

The Township administers its responsibilities through an Offical Community Plan, Zoning By-Laws and a Subdivision and Development Control By-Law.

The Soil Conservation Act delegates responsibility for issuance of soil removal permits in the Agricultural Land Reserve to the Township.

---

## AGENCY RESPONSIBILITIES IN THE ESTUARY

The City of New Westminster provides mandatory and discretionary services for its citizens under the authority of the Municipal Act and other legislation.

The City is very concerned with the development of land within its boundaries. The City influences development in three major ways:

a) Provision of utility services - water, sanitary, storm, electrical, roads, sidewalks, etc.

b) Construction of buildings - building, plumbing, electrical permits.

c) Zoning - defining use of property and conditions of use, such as parking, loading, landscaping, and setbacks.

Anyone desiring to develop property within the City limits should consult with the City authorities regarding the City restrictions and requirements.
